DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: b0-b7, b10, b10#, b17 and b17# in Fig. 2. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Oliver, 4,567,577.

Oliver, 4,567,577, discloses in Fig. 2 a SRAM device, used in digital computer (see lines 6-9, column 1), therefore, inherently including a processor as recited in claim 18, comprising:

first transistor pair PMOS 24 and NMOS 25;

second transistor pair PMOS 29 and NMOS 27;

first access transistor 22;

second access transistor 31;

bias NMOS transistor 35 having a source connected to ground VSS and its gate activated when WRITE signal being inactive (see lines 4-5, column 3), therefore, inherently read on the STANDBY signal as recited in claims 6 and 15.
